largest Floquet exponent μT over the k grid
total-variation bound $\mathrm{TV}_T[\ln \varepsilon]/4$
0
1
2
3
4
protocol ensemble: log-Fourier, up to 6 harmonics (400)
protocol ensemble: two-level and sinusoidal profiles (16)
extended: log-Fourier, up to 12 harmonics (80)
extended: sinusoid, $\delta \le 0.85$ (4)
extended: two-level switching (40)
bound, $\mu T = \mathrm{TV}_T[\ln \varepsilon]/4$
harmonic efficiency, $\mu T = (\pi/4)\,\mathrm{TV}_T[\ln \varepsilon]/4$
